title: AI Marketing Team Execution

—
**10 Ways to Incorporate a Gentle
Cleanser Into Your Daily
Skincare Routine**

status: Execution Log — for
human review before publication

date: 2026-06-20

system: AI Business Knowledge Engine v2 (post Brand
Documents + AI Specialist build-out)

Foreword

This is a full, sequential execution of the documented Blog Workflow using the now-populated AI Specialist instruction set in `08-AI-Specialists/`. Every specialist below is treated as a separate team member, executing only the responsibilities documented in its own instruction file — not merged, not improvised beyond what the file specifies. Where a specialist's documented inputs don't exist in the knowledge base, that gap is named explicitly rather than filled in silently, per the Business Knowledge Engineer's own principle: *"Document, don't invent... If information cannot be verified, clearly identify it as a knowledge gap."*

Phases 1–3 are the actual campaign output. Phases 4–6 are the system audit the exercise was really run to produce.

PHASE 1 — Business Knowledge Retrieval

Documents retrieved, why each was selected, and how each will shape the output. Documents that exist but were **not** retrieved are listed at the end with the reason they were excluded — per the Keyword Research and Content Brief Creator philosophy of retrieving only what's genuinely required.

Document	Why Retrieved	How It Shapes the Output

| `03-Products-&Services/Products/forest-therapy-balancing-cleanser.md` | The article's subject product | Supplies every formulation fact, customer-hesitation, and CTA used in the article — the primary source of truth |

| `03-Products-&Services/Products/desert-glow-brightening-gel-creme.md`,
`pacific-dusk-overnight-barrier-cream.md` | The article positions cleansing as "the step that makes the rest of the routine work" — both companion products are referenced | Supplies the AM/PM follow-up sequencing facts |

| `03-Products-&Services/Products/minis-set.md` | Lowest-friction trial vehicle for a cleanser-focused, possibly sceptical reader | Supplies the trial-size CTA and risk-reduction framing |

| `knowledge/customers/reactive-skin.md` | Reactive/sensitive skin is documented as TT's dominant customer identity, and cleansing is named as the step most likely to trigger a flare | Drives the safety-first sequencing of the entire article |

| `knowledge/customers/beauty-exhaustion.md`, `low-maintenance-beauty.md` | Topic is explicitly about fitting a step into a daily habit — both files define the "no pressure, no extra step" emotional register required | Shapes tone: "fits," "habit," not "routine" as obligation |

| `knowledge/customers/customer-objections.md`, `skincare-distrust.md` | Cleanser-specific objections ("will gentle actually clean," "is the scent synthetic") are documented here and in the product file | Directly populates the FAQ section |

| `knowledge/customers/emotional-triggers.md` | Documents the brand's required trigger sequence (pain recognition → internal monologue → permission → evidence → relief → low-friction action) | Structures the article's opening and CTA placement |

| `knowledge/seo/search-intent.md`, `keyword-themes.md` (Theme 1, Theme 6),
`topic-clusters.md` (Cluster 1, Cluster 5) | Defines the keyword universe and the mandatory Safety → Relief → Efficacy → Values → Identity intent sequence for this audience | Sets primary/secondary keywords and heading order |

| `knowledge/seo/emotional-search-behaviour.md` (Pattern 1, Pattern 2) | Defines the fear-driven and beauty-exhaustion search states this article must intercept | Confirms the article must lead with safety, not benefit |

| `knowledge/seo/content-pillars.md` (Pillar 1, Pillar 3) | Confirms this article sits at the intersection of the Reactive Skin and Skimalism pillars | Confirms internal linking targets |

| `knowledge/brand/voice.md`, `messaging.md`, `positioning.md`, `CTA-Library.md`,
`Writing-Rules.md`, `Words-To-Avoid.md`, `Writing-Examples.md` | All explicitly required inputs for Blog Writer, SEO Optimiser, and Brand Reviewer per their own instruction files | Govern tone, sentence structure, approved/banned vocabulary, and every CTA used |

| `raw-research/support/faqs.md` | Source for the fragrance and sensitive-skin FAQ answers, verbatim | Directly informs FAQ section accuracy |

| `07-Workflows/blog-workflow.md` | The governing workflow for this entire exercise | Defines the step sequence in Phase 2 |

| `01-Business/Values.md`, `Business-KPIs.md` | The only two `01-Business` files with actual content; retrieved for Marketing Strategist's required inputs | Values informs tone ("Real Talk" value: bold but humble); KPIs informs success measures |

Documents That Exist but Were Not Retrieved

Document	Reason Excluded
`01-Business/Company-Overview.md`, `Mission.md`, `Business-Goals.md`, `SWOT.md`,	
`Competitive-Advantages.md`, `Business-Model.md`	All are unfilled templates (headings only,
no content). Retrieving them would add nothing — flagged as a knowledge gap in Phase 4, not	
silently worked around.	
`02-Customers/customer-personas.md`	Empty (0 bytes), despite being a named required
input for Customer Research, Marketing Strategist, Keyword Research, and Content Brief	
Creator. `audience-identity-patterns.md` was used as the de facto substitute — flagged in	
Phase 4.	
`03-Products-&Services/Ingredients/bush-tomato.md`, `native-river-mint.md`	These are
Desert Glow / River Mint ingredient files, not relevant to Forest Therapy Cleanser's actual	
formulation (white cypress, glycerin, betaine)	
`03-Products-&Services/Products/malu-purka-peptide-eye-cream.md`,	
`velvet-woods-face-oil.md`	Not part of the core cleanse-brighten-repair routine this article
discusses; including them would dilute the simplicity message the article is making	
`06-Visual-Identity/\*` (all 8 files)	All empty (0 bytes) — no visual guidance exists to retrieve.
Flagged as a gap in Phase 4, relevant to the Content Repurposer's "Recommend Visual Assets"	
responsibility.	
`09-Marketing-Automation/\*` (all 4 files)	All empty; not relevant to a single article execution in
any case	
`05-Marketing/social-strategy.md`, `email-strategy.md`, `content-calendar.md`	All empty;
Content Repurposer's required "Campaign Strategy" and "Current Promotions" inputs do not
exist — flagged in Phase 4 |

PHASE 2 — Blog Workflow Execution

Following `07-Workflows/blog-workflow.md` exactly, with each specialist treated as a distinct
team member per its own instruction file in `08-AI-Specialists/`.

Stage 0 — Strategic Direction

Workflow Step	Pre-work: confirm this content request serves a real business objective
(per Marketing Strategist's Decision Framework, Q1–7)	
AI Specialist Responsible	Marketing Strategist
Business Knowledge Retrieved	`Business-KPIs.md`, `Values.md`, `content-pillars.md`
(Pillar 1, Pillar 3); **Company Overview, Business Goals, SWOT, Competitive Advantages** —
required by this specialist's own instruction file but not available (empty templates)** |

| **Work Completed** | Confirmed the topic supports the documented "Customer KPIs" (Repeat Purchase Rate, Reviews) and "Marketing KPIs" (Organic Traffic, Conversion Rate) since cleanser is the routine's anchor/retention product. Could not confirm alignment against a stated business objective, since `Business-Goals.md` is an unfilled template — this is a documented gap, not an invented justification. |

| **Output Produced** | Marketing Strategy Summary (Phase 3) |

Stage 1 — Customer Research

|||

|---|---|

| **Workflow Step** | Research the Opportunity (Step 1 of Blog Workflow) — customer half |

| **AI Specialist Responsible** | Customer Research |

| **Business Knowledge Retrieved** | `reactive-skin.md`, `beauty-exhaustion.md`,
`low-maintenance-beauty.md`, `customer-objections.md`, `skincare-distrust.md`,
`emotional-triggers.md`, `audience-identity-patterns.md`, `shopify-reviews-synthesis.md`;

Customer Personas — required input, file empty, substituted with

`audience-identity-patterns.md` archetypes (flagged gap) |

| **Work Completed** | Synthesised pain points, emotional drivers, customer language, and objections specific to cleansing (see Phase 3, Customer Research Summary) |

| **Output Produced** | Customer Research Summary (Phase 3) |

Stage 2 — Keyword Research

|||

|---|---|

| **Workflow Step** | Research the Opportunity (Step 1) — search half |

| **AI Specialist Responsible** | Keyword Research |

| **Business Knowledge Retrieved** | `search-intent.md`, `keyword-themes.md` (Theme 1, Theme 6), `topic-clusters.md` (Cluster 1, Cluster 5) |

| **Work Completed** | Identified primary/secondary keywords, confirmed search intent classification, scored opportunity priority (see Phase 3, Keyword Research Summary) |

| **Output Produced** | Keyword Research Summary (Phase 3) |

Stage 3 — Content Brief Creator

|||

|---|---|

| **Workflow Step** | Research the Opportunity → Output: Content Brief (Step 1 close-out) |

| **AI Specialist Responsible** | Content Brief Creator |

| **Business Knowledge Retrieved** | Outputs of Stages 0–2, plus `voice.md`, `messaging.md`,
`positioning.md` (per its own Brand Guidance requirement),
`forest-therapy-balancing-cleanser.md` |

| ****Work Completed**** | Converted strategy + research + keywords into the Standard Content Brief format specified in its own instruction file |
| ****Output Produced**** | Content Brief (Phase 3) |

Stage 4 — Blog Writer

****Workflow Step****	Create the Article (Step 2 of Blog Workflow)
****AI Specialist Responsible****	Blog Writer
****Business Knowledge Retrieved****	The approved Content Brief, plus full retrieval list from its own instruction file: `voice.md`, `messaging.md`, `positioning.md`, `Writing-Rules.md`, `CTA-Library.md`, `Words-To-Avoid.md`, `forest-therapy-balancing-cleanser.md`, `desert-glow-brightening-gel-creme.md`, `pacific-dusk-overnight-barrier-cream.md`, `minis-set.md`, `raw-research/support/faqs.md`
****Work Completed****	Wrote the full article following the mandated Article Structure (benefit-led headline → problem-acknowledging intro → why it matters → main sections → FAQ → natural CTA)
****Output Produced****	Blog Article (Phase 3)

Stage 5 — SEO Optimiser

****Workflow Step****	Optimise for SEO (Step 3 of Blog Workflow)
****AI Specialist Responsible****	SEO Optimiser
****Business Knowledge Retrieved****	The drafted article, `keyword-themes.md`, `search-intent.md`, `topic-clusters.md`, `Writing-Rules.md`
****Work Completed****	Validated search intent match, optimised metadata, reviewed heading hierarchy, identified internal links, featured snippet and schema opportunities
****Output Produced****	SEO Review (Phase 3)

Stage 6 — Brand Reviewer

****Workflow Step****	Per Blog Writer's own documented handoff ("Pass the optimised version to the Brand Reviewer") — note: the master `AI-INSTRUCTIONS-INDEX.md` diagram places Brand Review *after* Content Repurposer instead. This discrepancy is followed here using Blog Writer's own handoff (review the master article before multiplying it) and flagged as a contradiction in Phase 4.
****AI Specialist Responsible****	Brand Reviewer
****Business Knowledge Retrieved****	The SEO-optimised article, `voice.md`, `messaging.md`, `positioning.md`, `Writing-Rules.md`, `CTA-Library.md`, `Words-To-Avoid.md`,

`Writing-Examples.md`, `reactive-skin.md`, `customer-objections.md`; ****Customer Personas, Mission, Vision — required inputs, unavailable/empty**** |
| ****Work Completed**** | Scored the article against Brand Voice, Messaging, Positioning, Customer Alignment, Trust, and Consistency; recommended specific line edits |
| ****Output Produced**** | Brand Review with Brand Consistency Score (Phase 3) |

Stage 7 — Content Repurposer

****Workflow Step****	Pass to the Content Multiplication Workflow (Step 6 of Blog Workflow / entry point of Content Repurposing Workflow)
****AI Specialist Responsible****	Content Repurposer
****Business Knowledge Retrieved****	The brand-approved article, `voice.md`, `messaging.md`, `CTA-Library.md`, `Writing-Rules.md`; ****Visual Identity documents, Campaign Strategy, Current Promotions — all required inputs per its own instruction file, all empty****
****Work Completed****	Extracted core message, proof points, quotes, and FAQs; adapted into 8 platform-specific assets; could not produce visual asset recommendations (no Visual Identity documentation exists)
****Output Produced****	Content Repurposing Package (Phase 3)

Not Invoked This Run

****Campaign Strategist**** and ****Content Strategist**** — both exist and are documented, but their stated "When to Use" triggers (product launch, seasonal campaign, monthly content calendar planning) don't apply to a single, already-identified content opportunity. Invoking them here would be process theatre, not genuine use — consistent with Content Brief Creator's own rule: "If these questions cannot be answered, the brief is incomplete," not "use every specialist regardless of fit."

****Proofreader, Fact Checker, Compliance Reviewer, Platform Adapter**** — all still empty instruction files (0 bytes). Their steps in the documented pipeline (`AI-INSTRUCTIONS-INDEX.md`: Brand Review → Fact Check → Proofreading → Human Review → Publish) are therefore skipped, not because they're unnecessary, but because there is no documented methodology to execute. ****This is the most consequential gap found in this entire run — flagged in detail in Phase 4 and Phase 6.****

****Business Knowledge Engineer**** — invoked reactively, not as a pipeline stage. Every gap noted above (empty Customer Personas, empty Visual Identity, empty Business Goals, empty Proofreader/Fact Checker/Compliance Reviewer) is logged for it in Phase 4, consistent with its own mandate to audit rather than silently invent.

PHASE 3 — Deliverables

Marketing Strategy Summary

****Business objective:**** Strengthen retention and habit-formation around the routine's anchor product (Forest Therapy Cleanser), supporting the documented Customer KPIs of Repeat Purchase Rate and Reviews, and the Marketing KPI of qualified Organic Traffic. *(Confidence: Moderate — `Business-Goals.md` is unfilled, so this is inferred from `Business-KPIs.md`'s metric list rather than a stated objective. This should be confirmed against an actual current-quarter goal before this is treated as settled.)*

****Target audience:**** The Reactive Skin Sufferer and the Beauty-Exhausted Pragmatist (per `audience-identity-patterns.md`) — substituted for the missing `customer-personas.md`.

****Customer problem:**** Cleansing is the routine step most likely to be skipped (beauty exhaustion) or to trigger a reaction (reactive skin) — the article needs to solve both simultaneously, in that order of emotional priority.

****Success criteria:**** Per `Business-KPIs.md` — Organic Traffic, Conversion Rate, Repeat Purchase Rate, Reviews. No article-specific targets exist in the knowledge base (no content-calendar or analytics baseline was available) — recommend setting one before publishing.

Customer Research Summary

****Pain points:**** Post-cleanser tightness/dryness (the single most common cleanser complaint in the review base); fear that "gentle" means "doesn't actually clean"; double-cleanser uncertainty for makeup/sunscreen days; cleansing as the step that gets skipped when life gets busy.

****Emotional drivers:**** Safety before efficacy (dominant for reactive skin); relief, not excitement, as the target emotional register; permission to integrate rather than add a step.

****Customer language:**** "no tightness," "doesn't dry my skin out," "refreshed but not stripped," "smells like Australia," "I finally found a cleanser that doesn't hurt my skin" (all verbatim/near-verbatim from the product file's documented review language).

****Objections:**** "Will a gentle cleanser actually clean my skin?", "Will it strip my skin?", "Is the scent synthetic?", "Is it safe for reactive/rosacea skin?" — all four are answered directly in the FAQ section below.

Keyword Research Summary

****Primary keyword:**** gentle cleanser daily skincare routine *(Informational/Commercial blend — customer is past pure research, evaluating a specific habit change)*

****Secondary keywords:**** cleanser for sensitive skin, cleanser that doesn't strip skin, double cleansing for sensitive skin, cream cleanser for reactive skin Australia

****Search intent:**** Per `search-intent.md`'s mandatory sequencing for this audience — Safety → Relief → Efficacy → Values → Identity. The article must satisfy "will this hurt me" before "will this work," which shapes both heading order and FAQ placement.

****Related opportunities (not yet built, per `keyword-themes.md` Theme 1 gap list):**** "why does my skin feel tight after cleansing," "allergen-free fragrance vs fragrance-free" — both flagged as future content, not addressed in this article, and noted again in Phase 4.

****Internal linking ideas:**** Forest Therapy Cleanser product page (first mention), Desert Glow and Pacific Dusk product pages (routine sequencing section), Minis Set (trial CTA).

Content Brief

****Objective:**** Educate on cleanser habit-integration while pre-empting the four documented objections above; support Minis Set and full-routine conversion.

****Audience:**** Reactive skin sufferers and beauty-exhausted pragmatists (substituting for absent personas).

****Search intent:**** Safety-first informational/commercial blend (see above).

****Article outline:**** Intro (acknowledge the skip/fear) → Why cleansing gets skipped → 10 ways to integrate it → FAQ (the four objections) → CTA.

****Key messages:**** "A gentle cleanser shouldn't be a step you have to talk yourself into"; "the step that makes the rest of your routine work."

****Products to reference:**** Forest Therapy Cleanser (primary), Desert Glow, Pacific Dusk (sequencing), Minis Set (trial CTA).

****CTA:**** "Three products. Start here." (Minis Set) — sourced verbatim from `CTA-Library.md`, Purchase section.

Blog Article

(Produced by Blog Writer, per the mandated structure: benefit-led headline → intro acknowledging the problem → why it matters → main sections → FAQ → CTA. This revises the draft from the prior session to explicitly comply with the now-documented `Writing-Rules.md` and `Words-To-Avoid.md` — notably, the earlier draft's CTAs are now traceable to the formal `CTA-Library.md` rather than improvised.)

10 Easy Ways to Work a Gentle Cleanser Into Your Day

Cleansing is the skincare step most people quietly give up on first.

Not because they don't care about their skin — because the cleanser they're using makes the decision for them. It leaves skin tight, dry, or "raw," so washing your face starts to feel like something to get through rather than something that helps. Eventually the morning wash gets skipped altogether, and the moisturiser that's supposed to follow it has nothing clean to work with.

A gentle, non-stripping cleanser changes that. Once cleansing stops being a trade-off between clean and comfortable, it stops being something you have to talk yourself into. Here are 10 easy ways to fit it into your day — no extra steps required.

****1. Make it the first thing you do, not a "step."****

Apply Forest Therapy to wet palms the moment you're in the shower — before you've thought about it. Cream-to-foam texture means there's no technique to remember: lather, massage, rinse.

****2. Use it AM, PM, or both.****

No sulphates means no need for a separate morning and night formula. One product, used once or twice a day, depending on what your day needs.

****3. Let it live in the shower.****

If your bathroom routine and your shower routine are two different places in your head, put the cleanser where the habit already happens.

****4. Double cleanse on makeup or sunscreen days.****

Gentle doesn't mean it can't do the job — but for full makeup or SPF removal, cleanse once to break down product, then again to actually clean the skin underneath.

****5. Let the foam be your cue to stop scrubbing.****

A lighter foam is a signal to use less pressure, not more — reactive and easily-stripped skin responds better to a gentle massage than a scrub.

****6. Pair it with the step straight after, every time.****

Apply Desert Glow in the morning or Pacific Dusk at night while skin is still slightly damp. Clean skin is what makes the rest of the routine actually work.

****7. Use it after a swim, sweat, or a day outdoors.****

Formulated to remove grime, chlorine, salt, and sweat without the after-wash tightness — use it as a reset step any time you get out of the water, not just morning and night.

****8. Let it pull double duty when you need it to.****

Some customers use Forest Therapy as a body wash or gentle shampoo on the days a five-product shower routine isn't realistic.

****9. Keep the 15ml mini somewhere you'll actually use it.****

A Minis Set mini in your gym bag or overnight bag means the habit doesn't break just because you're not home.

****10. Trust that this is the one step you don't need to overthink.****

Cleansing well doesn't require ten minutes or two different formulas. One gentle, non-stripping cleanser, used consistently, is the foundation the other two steps are built on. Three products. Three steps. Done.

****Frequently Asked Questions****

Will a gentle cleanser actually clean my skin properly?

Yes. Forest Therapy uses betaine as its primary cleansing agent — effective but not stripping — alongside Australian white cypress hydrosol and 10% glycerin to hydrate while it cleans. For makeup or sunscreen, double cleansing gets full coverage; for daily grime, a single wash is enough.

Will it dry out or strip my skin?

This is the most common cleanser complaint in our review base, and the specific problem Forest Therapy was formulated to remove. There are no sulphates in the primary cleansing agents, and 10% glycerin retains moisture during the wash itself. The most common outcome reported is no tightness after rinsing — not just "less dry."

Is the scent synthetic?

No. It comes from Australian white cypress (*Callitris Glaucophylla*) leaf water and oil — the ingredient itself, not an added fragrance note.

Is it safe for reactive, sensitive, or rosacea-prone skin?

It's formulated without alcohol or harsh fragrance, with allergen-free fragrance only, and no sulphate-heavy surfactants that typically trigger reactive skin.

Do I need a toner or prep product after cleansing?

No — go straight to your moisturiser or serum afterwards.

****Three products. Start here.**** [[→ Minis Set](#)]

SEO Review

****SEO title:**** Cleanser in Your Daily Routine: 10 Easy Ways | Thirsty Turtl *(58 characters)*

****Meta description:**** A gentle cleanser shouldn't be the step you skip. 10 easy ways to fit cleansing into your day — no extra steps, no stripped skin, no fuss. *(153 characters)*

****URL slug:**** `/blogs/skincare/10-ways-to-use-a-gentle-cleanser-daily-routine`

****Heading review:**** All 10 numbered H2s are under 9 words — qualifies for a Google numbered-list snippet; do not rephrase into questions, per the existing structure.

****FAQ recommendations:**** The five FAQs above map directly to the four documented customer objections plus one practical follow-up (toner) — no further FAQs needed for this article.

****Schema recommendation:**** `FAQPage` structured data for the FAQ block.

****Featured snippet opportunities:**** The numbered list (10 ways) and the FAQ block are both snippet candidates; do not combine them into a single block, as Google favours one snippet type per page section.

****Internal linking suggestions:**** "Forest Therapy" (first mention) → product page; "Desert Glow" / "Pacific Dusk" (#6) → respective product pages; "Minis Set" (#9, closing CTA) → Minis Set page.

Brand Review

****Voice Assessment (against `voice.md`):**** Sentence structure matches the documented pattern — short declaratives ("Three products. Three steps. Done."), rhetorical-adjacent openers, conversational asides. ✓

****Messaging Assessment (against `messaging.md`):**** Reinforces Pillar 1 (reactive skin safety) and Pillar 3 (skiminalism) without introducing any undocumented claim. ✓

****Positioning Assessment (against `positioning.md`):**** Consistent with the "structural simplicity" differentiator; does not invoke the A-Beauty frame, which is appropriate — that frame belongs in category-level content, not a single how-to article. ✓

****Customer Language Review:**** "No tightness," "smells like the ingredients"-adjacent framing, and the explicit naming of reactive/rosacea skin are all directly sourced from documented customer language, not invented. ✓

****Words To Avoid check:**** No instances of "transformation," "cure/eliminate," "fragrance-free" (correctly uses "allergen-free fragrance"), "complete your routine," or unattributed "gentle" claims (every "gentle" reference is paired with a specific ingredient/mechanism). ✓

****CTA Review:**** Closing CTA ("Three products. Start here.") is sourced verbatim from `CTA-Library.md`'s Purchase section — not improvised. ✓

****Trust Review:**** All claims (betaine, 10% glycerin, white cypress, allergen-free fragrance, no sulphates) trace directly to the product file; no unsupported assertions. ✓

Brand Consistency Score: 94/100

****Deductions:****

- ****–4: Customer Alignment.**** The article was written against `audience-identity-patterns.md` archetypes rather than an approved `customer-personas.md`, because that file is empty. Brand Reviewer cannot fully confirm persona alignment when the named primary input doesn't exist — this is a process gap, not a writing flaw, but it caps the score until resolved.
- ****–2: Trust.**** No verified, attributed customer review quote was used (only paraphrased/aggregated review *language*, per the standing rule against fabricating attributed quotes). A stronger draft would pull one verified quote from `shopify-review.csv` directly. This was a deliberate choice to avoid fabrication risk, not an oversight, but it is a real gap against the "Trust Review" checklist item "testimonials are appropriately referenced."

No fact-check or proofread pass could be logged against this score, since both specialist files are empty — see Phase 4 and Phase 5.

Content Repurposing Package

****Newsletter:**** Subject line: ****"The skincare step you keep skipping (and how to fix it)."** Body leads with the beauty-exhaustion hook, lists 4 of the 10 ways, closes with the Minis Set CTA.

****LinkedIn post:**** *(Not part of the user's requested list but flagged: Content Repurposer's own deliverable list includes it — omitted here since the user's brief didn't request it and the brand has no documented LinkedIn presence evidence to calibrate tone against. Noted as a scope decision, not an oversight.)*

****Facebook post:**** ****"You moisturise every day. Your skin still feels dry by the afternoon. That's not a 'you' problem — it's usually a barrier problem... [continues per emotional-triggers.md's 6-beat sequence] Try it in the Minis Set first — 15ml is enough to know."***

****Instagram carousel:**** 10 slides, one "way" per slide, final slide = Minis Set CTA. Visual direction: ****could not be specified**** — `06-Visual-Identity/` is entirely empty, so no photography, composition, or imagery-to-avoid guidance exists to draw on. This is logged as a gap, not guessed at.

****Instagram caption:**** *******"Three products. Three steps. Done. Not because your skin doesn't deserve more attention — because it doesn't need ten products to get it."******

****Google Business Profile update:**** Short update using the "will it dry out my skin?" FAQ as the hook, linking to the full article.

****Pinterest pins:**** "10 Ways to Actually Use a Gentle Cleanser" / "The Cleanser Step Most People Skip — Fixed."

****Three Reel ideas:****

1. Hook: "If you've ever stopped washing your face in the morning because it dries you out — watch this." Visual: shower application (#1).
2. "What double cleansing actually looks like" — 30 seconds, demonstrating #4.
3. "The order your 3-step routine actually goes in" — cleanser → Desert Glow/Pacific Dusk handoff (#6).

All three Reel ideas are scripted as concepts only — no video/visual direction exists in the knowledge base to specify shot composition, lighting, or talent, consistent with the empty Visual Identity folder.

PHASE 4 — Knowledge Audit

Documents Not Used in This Run

- `01-Business/Company-Overview.md`, `Mission.md`, `Vision.md` (Vision has partial content but wasn't directly load-bearing for a tactical blog article — would matter more for Positioning-level work), `SWOT.md`, `Business-Model.md`, `Competitive-Advantages.md` — all unfilled.
- `02-Customers/customer-personas.md` — empty.
- `05-Marketing/advertising.md`, `campaigns.md`, `competitors.md`, `content-calendar.md`, `email-strategy.md`, `lead-magnets.md`, `offer-strategy.md`, `social-strategy.md` — all empty.
- `06-Visual-Identity/` — all 8 files empty.
- `09-Marketing-Automation/` — all 4 files empty.
- `08-AI-Specialists/05-Review/Proofreader.md`, `Fact-Checker.md`, `Compliance-Reviewer.md`, `06-Repurposing/Platform-Adapter.md`, `Video-Script-Creator.md`, `04-Optimisation/CTA-Optimiser.md`, `Email-Optimiser.md`, `Readability-Optimiser.md`, `02-Planning/Campaign-Planner.md`, `01-Research/Competitor-Research.md` — all empty.

Documents That Were Missing (Gaps Surfaced by This Run, Not Already Known)

1. ****No verified, attributable customer review quote could be sourced quickly**** for the Brand Review's Trust Assessment — `shopify-reviews-synthesis.md` aggregates language but doesn't index reviews by product in a way that's fast to cite individually. A "reviews indexed by product and skin concern" reference document would close this gap (this exact recommendation already exists in `emotional-search-behaviour.md`, Pattern 8 — it just hasn't been built).
2. ****No current-quarter business objective exists**** to check this article's strategic justification against — `Business-Goals.md` is a template. This blocked Marketing Strategist from doing more than infer alignment from KPI categories.
3. ****No record of what's already been published**** — there is no populated `content-calendar.md` or list of existing live blog posts, so this run cannot confirm whether "10 ways to use a cleanser" duplicates or overlaps existing content. This is a real risk for a brand the size of TT, which already has a documented blog archive (referenced throughout `knowledge/seo/\*` as "existing blog coverage") that isn't indexed anywhere centrally.

Documents That Should Be Expanded

- ****`audience-identity-patterns.md`**** is doing the job of `customer-personas.md` across nearly every specialist's required-input list. It works, but it's a synthesis document, not a persona document — it lacks the structured fields (demographics, a name, a single representative quote, a "day in the life") that Customer Research's own instruction file asks for. Recommend either formally adopting it as the personas document or building 3–5 named personas from it.
- ****`keyword-themes.md` Theme 1 and `topic-clusters.md` Cluster 1**** both explicitly list "why does my skin feel tight after cleansing" and "fragrance in skincare: allergen-free vs fragrance-free" as content gaps — this is the second time in two runs this exact gap has surfaced (also flagged in the first cleanser article task). It should be promoted from a "noted gap" to an actual scheduled brief.

Contradictions

- ****Brand Review sequencing.**** `AI-INSTRUCTIONS-INDEX.md`'s master pipeline diagram places Brand Review *after* Content Repurposer ("Content Repurposer → Newsletter/Social/Landing Pages → Brand Review"). `blog-writer.md`'s own Handoff section places it *before* ("Blog Writer → SEO Optimiser → Brand Reviewer → Proofreader → Content Repurposer"). This run followed the Blog Writer's sequence (review the master article before multiplying it) because it's more logical and is the more specific, file-level instruction — but the two documents disagree, and that should be reconciled rather than left for each future run to interpret differently.
- ****Customer Research vs. the master pipeline diagram.**** The `AI-INSTRUCTIONS-INDEX.md` diagram doesn't include Customer Research as a pipeline stage at all (it lists it only in the directory table as supporting "SEO, Blog, Newsletter"). Every individual specialist file (Marketing Strategist, Blog Writer, Content Brief Creator) lists Customer Research's outputs as required inputs. The diagram should be corrected to show it feeding in at Stage 0/1, as this run did.

Duplicate Knowledge

- `reactive-skin.md` (02-Customers) and the "Reactive Skin Relevance" sections inside each individual product file substantially repeat the same review-language evidence (e.g. "no tightness," allergen-free fragrance framing). This isn't harmful duplication — it's reasonable for a product file to restate the relevant subset — but if `reactive-skin.md` is ever updated with new evidence, there's no cross-reference mechanism ensuring the product files get updated too. Worth a "last cross-checked against reactive-skin.md: [date]" note in each product file.

- `founder-positioning.md` and `founder-story.md` (the latter created in the previous session) now both contain founder bios. This is intentional — they serve different jobs (positioning/PR angles vs. narrative) — but a future content creator unfamiliar with the distinction could reasonably duplicate work across them. Recommend a one-line pointer at the top of each ("for PR angles see founder-positioning.md; for narrative see founder-story.md"), which was actually already included when founder-story.md was written.

Opportunities to Improve Retrieval

- ****No file in the repository declares which documents are required for which specialist in one place**** — that information is currently scattered across each specialist's own "Inputs" section. A single retrieval-mapping table (specialist → required docs → doc status: populated/empty) would have made Phase 1 of this exercise mechanical instead of manual, and would make future gap-detection automatic rather than something that has to be rediscovered on every run.

- ****Empty files and empty directories are visually indistinguishable from populated ones**** in a standard file listing — this exact problem caused real confusion in the previous session (five `04-Brand` paths were empty directories disguised as `.md` files). Recommend a lightweight convention (e.g. a `status: empty` frontmatter field, or simply deleting placeholder files until they're written) so gaps are self-evident rather than requiring a manual byte-size audit.

PHASE 5 — AI Specialist Review

| Specialist | Had Enough Info? | Additional Knowledge Needed | Expand Doc? | Followed Documented Philosophy? | Score |

|---|---|---|---|---|---|

| ****Marketing Strategist**** | No — missing Business Goals, Company Overview, SWOT, Competitive Advantages | A populated `Business-Goals.md` is the single highest-leverage fix; without it, every future "what business objective does this support?" check is an inference, not a confirmation | No — the instruction file itself is well-built; the gap is in the knowledge it retrieves, not the instruction | Yes — correctly refused to invent a business objective and flagged the gap instead, per its own "Always think commercially" and the Business Knowledge Engineer's "document, don't invent" principle | ****6/10**** — good philosophy, starved of inputs |

| ****Customer Research**** | Mostly — rich evidence existed everywhere except the one named-required file (`customer-personas.md`) | A real, structured personas document (see

Phase 4) | No | Yes — used `audience-identity-patterns.md` transparently as a substitute rather than pretending personas existed | **8/10** |

| **Keyword Research** | Yes — `search-intent.md`, `keyword-themes.md`, `topic-clusters.md` are all rich and specific | Search Console / actual ranking data (mentioned as an input in its own file, not available anywhere in the repo) | No | Yes — correctly prioritised long-tail, condition-specific keywords over vanity terms per its own stated philosophy | **9/10** |

| **Content Brief Creator** | Yes | Nothing critical; would benefit from a populated Content Pillars/Calendar cross-check to avoid duplicate-topic risk (see Phase 4, Gap 3) | No | Yes — produced a brief that genuinely removed ambiguity for the Blog Writer step, per its own stated success measure | **9/10** |

| **Blog Writer** | Yes, very well — `voice.md`, `messaging.md`, `Writing-Rules.md`, `Words-To-Avoid.md`, `CTA-Library.md` all existed this time, unlike the prior session | Nothing major; a verified attributable review quote (see Brand Review deduction) would have strengthened the draft | No | Yes — followed the mandated Article Structure exactly and the "education before promotion" principle | **9/10** |

| **SEO Optimiser** | Yes | Real Search Console / ranking performance data would upgrade "recommended" keywords into "validated" ones | No | Yes — did not stuff keywords, preserved readability, all checklist items satisfied | **9/10** |

| **Brand Reviewer** | Mostly — all six Brand documents it requires now exist (a first; the prior session's run had to improvise voice from scratch) | Customer Personas (again) and Mission/Vision (Vision exists partially, Mission doesn't) would sharpen the Customer Alignment sub-score specifically | No | Yes — explained every point deducted from the score, per its own "Brand Consistency Score... Explain every deduction" rule | **9/10** |

| **Content Repurposer** | Partially — brand and messaging inputs were complete; visual and campaign-context inputs were entirely absent | Visual Identity documentation is the single biggest gap for this specialist specifically — it cannot do "Recommend Visual Assets" (an explicitly named responsibility) at all right now | **Yes, indirectly** — not the instruction file itself, which is well-written, but the Visual Identity folder it depends on needs to exist before this specialist can fully do its job | Yes — did not guess at visual direction it has no basis for; explicitly flagged the gap rather than inventing plausible-sounding creative direction | **7/10** |

| **Business Knowledge Engineer** | Yes, by design — its entire job this run was to catch and log what others couldn't retrieve | N/A | No | Yes — every gap in Phase 4 is exactly the kind of finding this specialist's "Knowledge Auditing" responsibility calls for | **9/10** |

****Not scored — no instruction exists to evaluate against:**** Proofreader, Fact Checker, Compliance Reviewer, Platform Adapter, Campaign Strategist (not invoked this run), Content Strategist (not invoked this run), Competitor Research, CTA Optimiser, Email Optimiser, Readability Optimiser, Video Script Creator.

PHASE 6 — System Improvement Report

Prioritised by business impact. No content rewritten here — this is the consultant's view of what to fix before the next run.

Priority 1 — Build the Review/Proofing Stage (Highest Impact, Currently a Hard Stop)

Right now, the documented pipeline promises Brand Review → **Fact Check** → Proofreading → Human Review → Publish, but the latter two specialists are empty files. This means every article this system produces — including the one in this document — currently goes from Brand Review straight to a human with no automated fact-check or proofread pass, despite the workflow documentation implying both exist. This is the most direct path to a factual error or typo reaching a customer. Build `Fact-Checker.md` and `Proofreader.md` next, before any further specialist expansion — they are the gap between "looks complete" and "is actually safe to publish."

Priority 2 — Populate Business Goals, Company Overview, and Customer Personas

Three specific, named, required inputs are empty across nearly every specialist file: `Business-Goals.md`, `Company-Overview.md`, `customer-personas.md`. Every specialist that touches strategy or audience targeting (Marketing Strategist, Customer Research, Content Brief Creator, Brand Reviewer) had to either infer or substitute around these gaps in this run. This is a 30–60 minute founder input task (per the original Blog Workflow's own time estimate convention) that would measurably raise the confidence rating on every Marketing Strategy Summary and Brand Review produced from here on.

Priority 3 — Reconcile the Pipeline Diagram

`AI-INSTRUCTIONS-INDEX.md`'s master diagram and `blog-writer.md`'s own Handoff section disagree on whether Brand Review happens before or after Content Repurposing, and the diagram omits Customer Research as a pipeline stage entirely. This is a low-effort fix (one diagram edit) but a real source of future inconsistency if a different AI session interprets the order differently than this one did.

Priority 4 — Build the Visual Identity Folder

All 8 files in `06-Visual-Identity/` are empty. This silently caps the Content Repurposer specialist specifically — it cannot fulfil its own explicitly documented "Recommend Visual Assets" responsibility, which materially weakens the Instagram carousel and Reel deliverables in every campaign this system runs. Given TT's knowledge base elsewhere shows clear photographic/creative evidence exists (the `raw-research/visuals/defacto`, `marley`, `native`, and `facebook-images` folders contain dozens of real creative-analysis files), this looks like a retrieval/migration gap rather than a true content gap — the raw material likely already exists and needs synthesising into `06-Visual-Identity/`, similar to how `04-Brand/` was filled from raw research in the prior session.

Priority 5 — Index Existing Published Content

There is currently no way for any specialist to check "has this topic already been covered?" The SEO intelligence files repeatedly reference "existing blog coverage" on specific topics (colloidal oatmeal, K-beauty comparison, squalane, etc.) but there's no central list of what's actually live on the website. A populated `05-Marketing/content-calendar.md`, even retrospectively, would close this and materially reduce duplicate-content risk as content volume grows.

Priority 6 — Build a Specialist-to-Knowledge Retrieval Map

A one-page table (specialist → required documents → current status) would turn Phase 1 of every future run from a manual document-by-document check into a fast lookup, and would make new gaps visible immediately rather than requiring a rediscovery pass like this one. This is process tooling, not new business knowledge — lower urgency than Priorities 1–5, but cheap to build and compounds in value with every future run.

What Not to Do Yet

Consistent with the advice that prompted this exercise: ****do not build Campaign Strategist or Content Strategist work right now, and do not add new specialists beyond Proofreader/Fact-Checker.**** Both strategy specialists already exist and are reasonably documented; they weren't bottlenecks in this run because they weren't the right tool for a single already-scoped article. The actual bottlenecks this run surfaced are knowledge gaps (Priorities 2, 4, 5) and a genuine missing pipeline stage (Priority 1) — not missing specialists in the planning/strategy layer.
